SUMMARY

- As a Bachelor of Engineering graduate with a passion for data analysis, I am eager to embark on a career as a Data Analyst, poised to tackle challenging opportunities in this dynamic field. My primary objective is to apply my analytical skills and knowledge to drive organizational growth while advancing my professional development. I possess a solid understanding of SQL and database management, complemented by proficiency in tools such as Microsoft Excel, MySQL, PowerBI, and Tableau for conducting comprehensive data analysis and extracting meaningful insights.

- GitHub: <https://github.com/Dhivyan1210>

KEY SKILLS

Languages: Python, SQL

Python Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Stats model

Data Query and Data Manipulation: SQL

Skills: Exploratory Data Analysis, Visualization, Microsoft Excel, Microsoft Word, Statistical Analysis

IDE: Jupyter Notebook, MySQL Workbench

Data Visualization: Tableau, MS Excel, PowerBI

Soft Skills: Adaptability, Time Management, Collaborative and Flexible

ACADEMIC PROJECTS

- **US Road Accidents**
 - Dataset: US Accidents dataset containing comprehensive information on traffic accidents in the United States.
 - Analysis Approach: Create a dashboard using Excel's pivot tables and pivot charts.
 - Parameters for Analysis: Explore accident causes based on factors like severity, junction detail, light conditions, road surface conditions, urban/rural areas, and vehicle types.
 - Dashboard Customization: Use filters and slicers to modify the dashboard for different conditions.
 - Goal: Improve accident control and prevention by analysing accident data effectively.
 - Key Skill: Proficiency in Excel, Pivot table.
- **Insurance Claim Amount**
 - Dataset: Insurance Claim Amount data, including customer occupation, education, and organization type.
 - Analysis Approach: Cleaned the dataset using Python's panda's library, conducted regression analysis with scikit-learn, and visualized results using matplotlib and seaborn.
 - Parameters for Analysis: Explored claim amounts based on customer details like occupation, education, and organization type.
 - Key Skills: Proficiency in Python for data analysis, pandas, matplotlib.

○ IPL (2008-2022) Dataset

- Dataset: IPL (2008-2022) containing player data (Batters and Bowlers) from various countries.
- Purpose: Use Tableau for data visualization to create charts for clear insights.
- Goals: Identify title winners, orange cap and purple cap holders. Analyse Matches Won based on Toss Decision, tournament statistics (4's and 6's), Batsman's stats, and Bowler's stats.
- Techniques: Utilize calculated fields, parameters, and filters in Tableau.
- Key Skill: Proficiency in Tableau for effective data analysis and visualization.

○ Hospital Database

- Dataset: The hospital database comprises tables such as admissions, patients, doctors, and province names.
- Purpose: The purpose is to gain hands-on experience in various SQL concepts, including keys, and to apply them to practical scenarios.
- Goals: The primary objective is to answer specific questions using SQL queries and retrieve the relevant data from the database.
- Key Skill: Proficiency in SQL concepts is essential, encompassing various aspects such as types of joins, subqueries, common table expressions, group by, order by, where clause, having clause, etc. Accuracy in query construction and execution is crucial for achieving the desired results.

OTHER ACHIEVEMENTS / CERTIFICATES

- Data Analytics Program – Great Lakes Institute of Management
- Introduction to Data Analysis using Microsoft Excel - Coursera
- Create Charts and Dashboards using Microsoft Excel – Coursera
- Data Analysis with Python – Coursera

EDUCATION

Course	Institution	Year	Remarks
Data Analysis Program	Great Lakes Institute of Management Chennai	2023	Completed
BE-Mechanical Engineering	Sri Ramakrishna Institute of Technology Coimbatore	2021	75.02%
12 th Std	Scism Matric Higher Secondary School Bodinayakkanur	2017	82.58%
10 th Std	Z.K.M Matric Higher Secondary School Bodinayakkanur	2015	91.2%
