SCHOLASTICS

JULY 2019 – APRIL 2021

M.Sc Applied Geology

Anna University (CEG), Guindy, Chennai.

CGPA:8.15 / 10

JULY 2016 – MAY 2019

B.Sc Applied Geology

*Jawahar Science College, Neyveli.
(Affiliated to Thiruvalluvar University,
Vellore)*

CGPA:8.0 / 10

CAREER OBJECTIVE

With the theory and practical knowledge obtained from my institution and work experience, I will contribute to the welfare of the organization through service and responsibility. To seek challenging and rewarding assignments where my passion can be fed and significantly contribute to develop the organization.

EXPERIENCE

GIS Analyst

Worked as GIS Analyst in EDR Continuous Information Pvt. Ltd, Chennai for the period of 8 months from 03/05/2021 – 28/12/2021 (May – December).

As a Lidar Analyst, Utilized LiDAR technology to process and analyze cloud images for topographic mapping with fine resolutions. Generated 3D polyline, contour, and planimetric features, providing detailed and accurate geospatial data. Applied expertise in mapping for various industries, including forestry, urban planning, and telecommunications. Demonstrated proficiency in highly accurate and reliable mapping of power line classification, irrespective of terrain complexity. Collaborated with cross-functional teams to integrate spatial data into project workflows, contributing to efficient decision-making processes.

GIS Geoscientist

Worked as GIS Geoscientist in Indigeo Consultants Pvt. Ltd, Bangalore from 05/01/2022 – present.

As a GIS Geoscientist, I've successfully applied geospatial technologies to analyze and interpret data, creating insightful maps and reports. Proficient in GIS software, I've collaborated with cross-functional teams to provide spatial solutions, contributing to effective decision-making. My responsibilities included data collection, spatial analysis, and creating visualizations that enhanced overall project outcomes. Additionally, I've stayed abreast of industry trends, ensuring the application of the latest GIS tools and techniques to optimize workflow efficiency.

Processed multispectral and panchromatic imagery to extract meaningful geospatial information. Demonstrated expertise in georeferencing, ensuring accurate spatial positioning of data for mapping and analysis. Conducted 2D and 3D data capture, utilizing advanced tools and techniques to create comprehensive spatial models. Compiled legacy data, contributing to the organization and preservation of historical geospatial information. Prepared data for AI applications, enhancing machine learning models for geospatial analysis and interpretation. Conducted Environmental Impact Assessments (EIA) by analyzing geospatial data to evaluate and mitigate environmental risks. Managed drill lithology logs, facilitating efficient exploration and resource assessment. Oversaw exploration database management, ensuring the integrity and accessibility of geological and geospatial data. Applied

FIELD TRAININGS

1. PALEONTOLOGY field training (**Ariyalur, Niniyur, Uttathur, Thiruchirapalli**,etc.,.)
2. PETROLOGY field training (In and around **Salem, Karur**,etc.,.)
3. Field visit and training in **NLCIL**
4. PETROLOGY field visit to St. Thomas Mount (**Charnockite rock**)
5. GEOLOGICAL MAPPING field training (**Tiruthani**)
6. Case study of Chennai CoastalGeomorphology (**Chennai Coast**)
7. Geological mapping field work (In and around **Chitradurga, Karnataka**)
8. Laterite and Iron ore exposure (**Vasco DaGama**)
9. **NIO – GOA** Marine Instrumentation.
10. Columnar Basalt- **Udupi St. Mary's Island**.
11. Field visit to **Mahabalipuram** (Sea shellidentification and collection)
12. Field visit to **Thiruvakkarai** (Wood Fossil)

CONNECT WITH ME

[linkedin.com/in/kaavya-v](https://www.linkedin.com/in/kaavya-v)

satellite image processing techniques to extract valuable insights for geological and environmental studies. Facilitated language translations for geoscientific data, promoting effective communication across diverse teams and stakeholders. Collaborated with interdisciplinary teams to integrate geospatial data into comprehensive project workflows.

Student Trainee

Student Trainee in Avakasa Geo Science Research Technology.

CERTIFIED COURSES

Masters in Geospatial Analysis (Nov 2023 – Feb 2024) authorized by **AGSRT (Avakaza Geo-science Research and Technology)**

In the course I gained the knowledge of

1. **ArcGIS Pro, ArcGIS Online**
2. **Arcpy**
3. **PostgreSQL with PostGIS**
4. **AI and ML using EOFactory Platform**
5. **Geoserver**

Upstream Oil and Gas Process Automation and Control (Jan20, 2024) from Udemy.

AutoCAD 2024 -2015 + Fusion 360: A Complete Designer's Guide (Jan 2024) from Udemy.

Data Analytics Training (June – October 2021) authorized by **Hope Foundation in collaboration with LTI (Larson and Toubro Infotech)**.

In data analytics I gained the knowledge of

1. **MS Excel** advanced level
2. **Python programming** basics.
3. **Databases** – SQL server, My SQL
4. Data analysis using **Tableau**.

Oil And Gas Industry Operations And Markets (Nov 4, 2020) authorized by **Duke University** with the aggregate of 94.06%

ACADEMIC PROJECT

Microfaunal studies of the river mouth sediments of uppanar, Tharangambadi, East Coast of India.

Core sample collected from Uppanar river mouth, Tharangambadi. Core cutting and sub sampling were done. Sand-Silt-Clay analysis was completed by wet sieving method. Calcium carbonate analysis was completed by Rowell's estimation of calcium carbonate method (1994). Loss on ignition test for estimation of organic matter was completed by UV Davis loss On Ignition method. Microscopic analysis were carried out after wet sieving of the subsamples. Microfaunals were identified. Microfossils of several depth were subjected to FTIR analysis. FTIR method is to analyse the variation in Organic matters of Benthic foraminifera (*Ammonia beccarii*). In FTIR, IR radiation is passed through the sample. The resulting spectrum represents the molecular absorption and transmission, creating a molecular fingerprint of the sample. The functional groups present in the benthic foraminifera shells were recorded in the spectral range of 4000–400^{cm} using an FT-IR Spectrophotometer. Final result of the FTIR study was compared with Sediment analyses done before. Final results were obtained and the organic content analysis were done. Thesis of my project will be included in my guide's research paper in future.
