Mobile : 98160-80724

My current job's duties and responsibilities

Delivery of technical GIS projects (electric, gas, water, sewer, storm water, smart cities and land base), managing the project teams, ensuring that projects are delivered on time and within budget, meeting the quality standards of the organization.

Working with the business to understand their needs and ensure that projects are aligned with their goals and making the solutions as per the business needs, showcase the solutions and program plans to end customers.

Setting goals, assigning tasks, providing feedback, leading from front and participating in customer escalation calls.

Drive RFPs, make solutions, plan team to deliver the project, technical presentations to end customers and within the organization.

Identify and mitigate risks, communicate effectively with stakeholders, manage change effectively, conduct regular reviews of project/s to ensure on track status and escalate issues as needed.

Ability to work independently and as part of a team. Using confluence collaboration tool & Microsoft Visio for flowcharts and organization charts, Using JIRA & PAR for query handling system.

Strong problem solving and analytical skills. Ability to work under pressure, meet deadlines and skilled at overseeing daily milestones across large teams.

Daily/weekly calls with overseas customers for status updates, technical meetings, presentations, trainings, and new project meetings.

My Technical Responsibilities & Skills

Utility Network data model design as per the customer requirements, UN data model configurations, asset package schema changes & exports, preparation of source data mapping matrix, data migration from different legacy systems to target UN model with Python scripting/FME/ETL tools, data cleanup for ADMS imports, UN deployments.

Implementation, Installation/Upgrade/Migration and setup of ArcGIS/ArcGIS Enterprise on On-premises, Cloud Environment, performance fine-tuning and solutions.

Hands on experience with ESRI Product suite ArcGIS Desktop, ArcGIS Online, ArcGIS Enterprise geodatabase administration, ArcGIS Workflow Manager, Field Maps, survey123, etc.

Exposure and Hands on experience with ArcGIS Enterprise, Troubleshooting the issues, maintenance and administration of ArcGIS portal, ArcGIS server, Publishing the Services and develop the Maps, Apps on Portal.

Knowledge and awareness of SQL, FME, ETL processes.

Certified in **Esri's ArcGIS Desktop Associate & FME certified professional**

Experience in GIS leading large, cross team initiatives.

Currently working for **RAMTeCH Software Solutions** as a **Manager Projects** and seeking a new challenge in your organization with greater responsibility where my experience drives in Utility projects.

Major Milestones

- Recently completed the Utility Network project for CenterPoint Energy, USA and PPL (Rhode Island Gas) – Just finished & GO-LIVE for multiple areas in electric and gas domains.
- Successfully completed multiple Utility / landbase projects for domestic & overseas clients such as **Center Point Energy USA (Electric & Gas), PPL electric data conflation, Esri Inc, Redlands, NSTAR Electric data migration, USA, Texas gas data conversion, Gujarat Gas project, Surat India, Hongkong land record data migration, GMDA-Gurugram, India,**
- Hands on experience in RFP study and raise the initial questions, technical proposals preparation with effort estimation and process methodology, process flowcharts, pilot executions, requirements gathering, data model design, data model configuration, data migration, data clean-up and deployments.

Key GIS Technological Skills

- Esri's ArcGIS Pro
- Esri's Utility Network Data Model Design, Configurations, Data migration from legacy systems & Data Management in enterprise environment
- Schneider's ArcFM Editor XI Configuration & Data management
- Esri's ArcGIS Enterprise GDB Model and ArcGIS Online concepts
- Asset Management
- AutoCAD, MicroStation, FME
- FME for data migration tasks
- Python for data migration
- ArcGIS Workflow Manager
- ArcGIS Data Reviewer

Key GIS Activity Skills

- RFPs study, understanding & prepare the technical proposals (Objective, Scope, Inputs, Deliverables, Process methodology, Process flow charts, Risks, Assumptions, Query handling mechanism etc.) & effort estimates for quotations.
- SME support for Pilot/prototype/POC/Projects executions.
- Resource estimations & allocations for the projects.
- Well versed in preparation of project specifications, data model gap analysis data model design for utility projects, UN configuration by asset package method and manual method, mapping matrix, migration workflows, and feasibility studies for electric, gas, water & sewer projects.
- Data migration from various legacy systems (such as Intergraph's G\Tech data, Esri's geometric Network, ArcGIS coverages, Shapefiles, AutoCAD, MapInfo etc.) to Esri UN format, Data conflation including data clean-up/corrections, data re-projections in different levels, new data creation, testing and trainings.
- Utility Network implementations on Esri's enterprise geodatabase platform & publishing workflows, branch versioning workflows
- Monitoring & Control, Risk management plan, mitigation & contingency plans
- MS Project, Word, Excel, Access, PowerPoint, Postgres SQL, and SQL Server
- Technical Presentations of UN and other utility GIS
- Microsoft Excel, PowerPoint, Microsoft Office, MS Project
- Possessing good experience in conducting field surveys as and when it is necessary to develop the GIS database
- Good knowledge of imagery & base map caching using ArcGIS server administration, publishing of services & desktop tools
- Good experience in managing the Geodatabase Replication for all types likes 2-way, 1-way & check-in check out procedures
- Good knowledge of Managing the Raster dataset, Raster Catalog, Mosaic Dataset Including the ArcGIS server Image services and caching
- Oracle & SQL Server Database Backups/Restore and Maintenance

Key Managerial Skills

- Project Scheduling
- Client liaison
- Client Communications
- Team Building, Collaboration & Leadership
- Training & Development
- Vendor Management
- Flexible & Adaptable
- Enterprise Implementations
- Project Budgeting & Cost Controls
- Project Scheduling
- System Migrations
- Program Management
- Quality Assurance
- Operations Management
- Delivery Management
- Quality Management
- Client Management
- Requirements Definition & Analysis
- Provide GIS solutions to partners such as tools, processes, methods, services.
- Create and lead presentations, convert opportunities to projects.
- Responsible in building pipeline projects, working with marketing and sales/pre-sales teams for client demonstrations.
- Risk Management

Professional Experience with Utility/Landbase Clients & Project RAMTeCH Software Solutions Pvt. Ltd - Jan 2022- till date

1) CPS – Electric data migration to Utility Network

Client – PPL, Pennsylvania, USA

Duration - March 2024 to till date

Role – Manager -Projects

Team Size - 26

Description – CPS electric data migration from source Geometric network to ArcGIS Utility Network using python & .net

Responsible for:

- Review of source data/ model, data migration mapping files & target data model
- Understand the client's requirement and develop tools using python & .net for data migration
- Develop ArcGIS data reviewer workspaces (RBJ) to check the quality of data
- Guide developers to develop the migration python scripts and tools
- Raise technical queries, source data discrepancies, UN asset package related issues using PAR system
- Analyse source and target data to resolve the UN tracing, network topologies and subnetwork related issues
- Study the existing AP, Create UN domain network and apply AP into this
- Add rules, modify associations, containments, and connectivity rules as per requirements
- Configure data to ready for Esri Utility Network
- Prepare Source to target data mapping matrix, migration specification documentations
- Generate quality reports and export asset packages
- Final data inspection before delivering to onsite team

2) PPL – Rhode Island Gas data migration to ESRI Utility Network

Client – PPL, Pennsylvania, USA

Duration - Nov 2022 to June 2024

Role – Manager -Projects

Team Size – 25

Description – CNP electric data migration from source FGDB/MapInfo to ESRI UN data model using python & .net

Responsible for:

- Review of source data/ model, data migration mapping files & target data model
- Understand the client's requirement and develop tools using python & .net for data migration
- Develop ArcGIS data reviewer workspaces (RBJ) to check the quality of data
- Guide developers to develop the migration python scripts and tools
- Raise technical queries, source data discrepancies, UN asset package related issues using PAR system
- Analyse source and target data to resolve the UN tracing, network topologies and subnetwork related issues
- Study the existing AP, Create UN domain network and apply AP into this
- Add rules, modify associations, containments, and connectivity rules as per requirements
- Configure data to ready for Esri Utility Network
- Prepare Source to target data mapping matrix, migration specification documentations
- Generate quality reports and export asset packages
- Final data inspection before delivering to onsite team

3) Center Point - Electric data migration to ESRI Utility Network

Client – Center Point Energy- Houston, Texas, Indiana regions, USA

Duration - Jan 2022 to April 2024

Role – Manager -Projects

Team Size - 25

Description – CNP electric data migration from source FGDB/MapInfo to ESRI UN data model using python & .net

Responsible for:

- Review of source data/ model, data migration mapping files & target data model
- Understand the client's requirement and develop tools using python & .net for data migration
- Develop ArcGIS data reviewer workspaces (RBJ) to check the quality of data
- Guide developers to develop the migration python scripts and tools
- Raise technical queries, source data discrepancies, UN asset package related issues using PAR system
- Analyse source and target data to resolve the UN tracing, network topologies and subnetwork related issues
- Study the existing AP, Create UN domain network and apply Asset package
- Add rules, modify associations, containments, and connectivity rules as per requirements
- Configure data to ready for Esri Utility Network
- Prepare Source to target data mapping matrix, migration specification documentations
- Generate quality reports and export asset packages
- Final data inspection before delivering to onsite team

Esri India Technologies Pvt. Ltd - Dec 2003- Jan 2022

4) GISWebTech - Recruit property database management

Client - GISWebTech, USA

Duration - Oct 2020 to Jan 2022

Role - Database Analyst

Team Size - 4

Description - To keep Recruit property data in Azure SQL database up to-date using FME workbench tools

Responsible for:

- Understand the client's requirement and develop tools using FME (Feature manipulation engine of Safe Company)
- Develop/modify FME workbench tools as per the client's requirements.
- Execute regular weekly recurring syncs to keep the Azure SQL database up to date.
- Regular meetings with GISWebTech

5) BUDA - Bihar Urban Development & Housing Department GIS Portal

Client: BUDA - Patna

Duration: Feb 2020 to Oct 2020

Role: Project Manager

Team Size: 8

Description: Development of Bihar GIS portal for UDHD (Urban Development & Housing Department)

Responsible for:

- Data model designing based in AMRUT
- Citizen Property Tax WebGIS portal with configurable Collector App
- Citizen Solid Waste Management GIS Portal
- Grievance GIS Portal (Android Mobile App for Citizen)
- Prepare GIS Web map and Web map service publication through ArcGIS Server/Portal
- GIS Data migration from Shape files to Esri Enterprise Geodatabase
- QC/QC tools creation (Data reviewer) and correction of the data issues
- Project workflow and process creation/implementation and documentation
- Quality control and final inspection of the deliverables before delivering to client.
- Technical support to UDHD GIS project team

6) GMDA -Gurugram Metropolitan Development Authority Web Map

Client: GMDA - Gurugram Metropolitan Development Authority

Duration: May 2019 to Dec 2019

Role: Project Manager

Team Size: 8

Description: Esri Technical support to GMDA (Gurugram Metropolitan Development Authority) and GMC (Gurugram Municipal Corporation)

Responsible for:

- Data model designing and finalization
- MXD optimization and Web map service publication through GIS Server
- Map document generation and creation of the Map Package (*.mpk)
- QC/QC tools creation and correction of the data issues
- Project workflow and process creation/implementation and documentation
- Quality control and final inspection of the deliverables before delivering to the client
- Technical support to GMDA GIS project team

7) Survey of India data migration and map generation

Client: SOI

Duration: Feb 2019 to June 2019

Role: Project Manager

Team Size: 6

Description: The data migration from Micro Station (DGN) to Esri enterprise geodatabase (WMX) using migration tool and workflow manager

Responsible for:

- Project Management
- Data model designing
- Map template creation for map generation at different scales
- Creation/updating of layer mapping & field mapping for data migration from Micro Station to Esri Technology
- Workflow manager customization and process implementation
- QC/QC tools creation and auto correction of the data issues
- Data generalization of data from 10K scale to 25K scale maps
- Effort estimation & technical proposals
- Project workflow and process creation/implementation and documentation
- Quality control and final inspection of the deliverables before delivering to the client
- Query and resolution with project team

8) Brihanmumbai Electric Supply & Transport Undertaking data migration

Client: Esri Inc.

Duration: Nov 2018 to Jan 2019

Role: Project Manager

Team Size: 3

Description: the data migration from GTECH to Esri enterprise geodatabase using mapping matrix and different migration tools.

Responsible for:

- Data model designing and demo to customer
- Creation of Layer mapping & Field mapping for data migration from GTECH to Esri Technology
- ArcFM data model designing
- Effort estimation & technical proposals
- Project workflow and process creation/implementation
- Quality control and final inspection of the deliverables before delivering to the client
- Query and resolution with project team

9) SLO - San Luis Obispo County Parcel Fabric data conversion

Client: Esri Inc.

Duration: Apr 2018 to Sept 2018

Role: Project Manager

Team Size: 29

Description: Conversion of SLO Asr Map documents to Parcel fabric data for Map creation

Responsible for:

- Project Management
- QMS requirement assessment
- Effort estimation & technical proposals
- Project workflow and process creation/implementation
- Managing data in Arc SDE environment includes versioning, reconciling- posting of versioned data, check-in/Out of the data and compressing database.
- Parcel fabric data conversion from available source docs
- Quality control and final inspection of the deliverables before delivering to the client
- Capture miscellaneous feature for DDP (data driven pages) and check Quality of work captured by team

10) PPL - Electric Distribution, Transmission & Landbase Data Conflation Project

Client: PPL

Duration: Feb 2016 - Sept 2018

Role: Project Manager

Team Size: 48

Description:

Re-alignment of existing PPL electric distribution & transmission facilities and land base data with the reference of AGOL/Google Map/Street view/Bing Map. Using Esri's 2-way replication system and ArcSDE Geodatabase versioning for data conflation and management.

Responsible for:

- Project management
- Requirement assessment
- Effort Estimation & technical proposals
- Project Workflow and process creation and implementation
- Work assignment to Production and QC team
- Oracle 11g/ ArcSDE data administration and management
- Geodatabase backup and restore etc.
- ESRI Geodatabase Replication
- Bug tracking through JIRA

- Client interaction and communication
- Quality Control and audits
- Automated tool customization for QC
- Final inspection of deliverables

Software: ArcGIS Desktop 10.2.1, Data Reviewer & ArcSDE with Oracle 11 g **Platform:** Windows 7 Professional

11) Hawaii School CAD Data Migration Project

Client: ESRI Inc.

Duration: Feb 2016 - April 2016

Role: Project Leader

Team Size: 12

Description:

- Hawaii Schools CAD data migration includes:
- Migration of CAD floor plans using designed model builder tool Attribute population from cad using tool and manual as well Manual cleanup of migrated CAD
- Spatial Adjustment of floor plans and BuildingInteriorSpace on high resolution imagery

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Work assignment to Production and QC team
- Client interaction and communication
- Quality Control and audits
- Final inspection of deliverables

Software: ArcGIS Desktop 10.3.1, Data Reviewer & AutoCAD Map **Platform:** Windows 7 Professional

12) ESRI ArcGIS Online Imagery Caching Project

Client: ESRI, Redlands, CA (USA)

Duration: Oct 2015 - Dec 2015

Role: Project Leader

Team Size: 6

Description: To generate the cached imagery for ArcGIS Online Imagery contents for ESRI using the source data in various resolution

Responsible for

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Source Data Evaluation
- Build Footprints suing GDAL tool
- Create Mosaic Datasets & Build Overviews
- Work assignment to Production and QC team
- Client interaction and communication
- Issues Resolving
- Generate Cached Imagery from multiple source imageries
- Quality Control
- Final inspection of deliverables

Software: ArcGIS Desktop 10.3.1, GDAL

Platform: Windows Server enterprise & ESRI's VPN

13) TTCMIS Parcel Remediation Project

Client: Trimble Navigation Ltd.
Duration: July 2015 - Jan 2016
Role: Project Leader
Team Size: 26

Description:

Parcel Data Remediation includes:
Remove Duplication of parcels, gaps, overlaps of existing parcels and make single representation of Parcel
Source Survey documents linking to respective parcels using Book/ Folio & General Plans
Spatial Adjustment of remediated parcels as best fit to Orthophoto (12.5 cm GSD resolution)

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Work assignment to Production and QC team
- Client interaction and communication
- ArcSDE and WMX database administration
- Reconcile/Post, Database Backup & Maintenance
- Issues and conflicts resolution
- Version Management
- Manage WMX and assign Jobs
- Quality Control
- Manage large team
- Final inspection of deliverables

Software: ArcGIS Desktop 10.3.1, Data Reviewer, ArcSDE Geodatabase with SQL Server 2008 R2 & Workflow Manager

Platform: Windows Server enterprise & Windows 7 Professional

14) JBWD (Joshua Basin Water Department) Water Data Migration Project

Client: JBWD
Duration: July 2015 -Aug 2015
Role: Project Leader -Quality
Team Size: 8

Description: To create a Water network Geodatabase by migrating the JBWD existing source DWG Files into ESRI LGIM Data model. Attribute population from DWG file. Water network cleanup, attribution, Maintain geometric network connectivity

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- DWG files migration to LGIM Data Model
- Attribute population from DWG file
- Water network cleanup & attribution
- Maintain geometric network connectivity
- Work assignment to Production and QC team
- Client interaction and communication
- Issues resolving of team members
- Quality Control
- Final inspection of the deliverable data

Software: ArcGIS Desktop 10.3.1, Data Reviewer & ArcSDE database

Platform: Windows Server enterprise & Windows 7 Pro

15) Victorville Sewer Project

Client: Trimble Navigation Ltd.

Duration: Aug 2015 -Sept 2015
Role: Project Leader/Quality
Team Size: 10

Description: To update the existing Sewer network data using the sewer improvement plan (surveyed) provided by customer and migrate the existing data model into ESRI LGIM Data model

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Create new enhancements/ projects
- Update existing as per new improvement plans
- Attribution
- Maintain Geometric network Connectivity
- Work assignment to Production and QC team
- Client interaction and communication
- Quality Control
- Migrate the Sewer Geodatabase to LGIM data model
- Final inspection of deliverables to client

16) ArcGIS offline Imagery Layer Creation Project

Client: Digital Globe
Duration: Feb 2015 -June 2015
Role: Project Leader
Team Size: 5

Description: Creation of ArcGIS offline imagery Layer (cached bundle) for multiple levels from a large number of tiles (.jpg & GeoTIFF formats) by using ArcGIS Server tools (Service creation, publishing and caching). Final Quality Assurance of final cached imagery layer

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Input Data Inventory (Large number of tiles)
- Work assignment to Production and QC team
- Client interaction and communication
- Issues and conflicts resolution
- Create Raster Catalogue
- Load Images and build overviews
- ArcGIS Service creation
- Caching the Imagery
- Quality Control
- Manage large team
- Final inspection of deliverable ArcGIS offline imagery layer

17) RJIL Town Creation Project

Client: RJIL, Mumbai
Duration: Oct 2014 -Dec 2014 **Role:** Team Leader/Quality Reviewer **Team Size:** 50

Description: About 4300 Town Maps created for RJIL to support their large 4G implementation in India

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Work assignment to Production and QC team
- Client interaction and communication
- Quality Control
- Manage large team
- Final inspection of deliverables

18) City of Minneapolis Water Data Conversion Project

Client: ESRI, Redlands, CA (USA)

Duration: March 2014 -Oct 2014

Role: Project Leader

Team Size: 15

Description: The intersection card attribute conversion will focus on capturing attributes from Intersection cards and updating the Water geodatabase feature classes and feature types. There are approximately ~8500 intersection cards that will be used to populate the attribute information 16 and greater pipes. Esri India will submit questions to City for resolution/answers when intersection card information is not clear for attribute capturing. If any geometry discrepancy found between the GIS data and intersection card, Esri will create anomaly polygon features for such locations for Cities review and appropriate resolutions for these cases. The geometry will be updated by the City but Esri India will be responsible for the attributes update on new or existing features. It includes capturing the missing water network features and maintains water network connectivity as per source intersection cards. If some features are not snapped in place, then Esri India snaps them.

Responsible for:

- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Team Management
- ArcSDE Geodatabase Administration
- Manage 2- way Replica Geodatabase
- Work assignment to Production and QC team
- Client interaction and Technical discussion
- Quality Control by manual and using RBJ
- Bug logging & tracking through TFS
- Final inspection of Water Geodatabase deliverables

19) NSTAR Electric Data Migration Project

Client: ESRI, Redlands, CA (USA)

Duration: Nov 2011 -April 2015

Role: Project Leader

Team Size: 6

Description:

Migration of electric distribution, fiber and Landbase Arc Storm databases format with related Oracle relational database tables to ArcGIS 10x ArcSDE Geodatabase format in an ArcFM Electric/Landbase schema, Data Migration using ETL and SQL scripts, QA/QC of migrated data
Electric data cleanup to support the Geometric network and ArcFM feeder manager configuration.

Responsible for:

- Requirement Analysis, creating project plans, work assignment to team member
- Quality Control and final inspection of the final deliverables before delivering through
- Oracle dump/pump export to the ESRI Redland
- Data Migration using ETL, and SQL scripts developed by ESRI
- System/software setup
- Data pump files import into database.
- ArcSDE Configuration with Oracle 11.0.2.0.2.0
- User creation, Manage Roles and Permissions
- Grant/Revoke database privileges
- Managing data in ArcSDE Environment
- Manage versioning
- Reconcile-post of version.
- Backup/Restore Oracle database
- Compress Database
- Oracle data pump/dump files export/import
- Quality control using PLTS and SQL Queries
- QA/QC of Final Deliverables
- Final Delivery to Client

Software: ArcGIS Desktop 10.0, ArcSDE, Oracle 11g (11.2.0.2.0), SQL Scripts & ETL migration tool **Platform:** Windows Server enterprise & Windows 7 Pro

20) APDRP (Accelerated Power Development and Resource Plan) Project

Client: Govt of Karnataka

Duration: Jan 2012 -June 2013

Role: Team Leader/Quality

Reviewer **Team Size:** 45

Description: The scope of work for R-APDRP includes geometrical correction of the geo database. The work includes segmentation, attribute population, bad geometries cleanup and snapping appropriate features to maintain electric network connectivity. The work also includes geometric network tracing and maintaining of correct electric flow. Scopes of project create GIS Electric network database and tracing with Arc FM platform.

Responsible for:

- Check for loops and connectivity
- Check availability of all attributes i.e., RMU Code, DTC Code, and FPB Code
- Load Data in Arc FM Template Using Mapping Matrix
- Load Data on SDE Server
- Update Start Point ID and Terminating Point ID
- Update Parent ID for all assets as per flow using Asset Hierarchy
-
- Requirement assessment
- Effort Estimation & proposal
- Project Workflow and process creation and implementation
- Work assignment to Production and QC team
- Client interaction and communication
- Issues and conflicts resolution
- Quality Control
- Manage large teams
- Final inspection of deliverable

Software: ArcGIS Desktop 10.0, Data Reviewer & ArcFM

Platform: Windows Server enterprise & Windows 7 Pro

21) KUB- ArcFM Electric Data Realignment Project

Client: ESRI, Redlands, CA (USA)

Duration: December 2010 –Aug 2011

Role: Team Leader/Quality Reviewer

Team Size: 8

Description: The project entails realigning the electric networks data from KUB's existing ArcFM Geodatabase based geo-schematic dataset using GIS technology. The work involves manually realignment of KUB's electric circuit lines, associated features including annotations and underground locations to the existing spatially accurate Pole (overhead) and PAD (underground) locations. This task accomplished by referencing land base features, aerial photography, Underground URD drawings, and other relevant data provided by TM&M/KUB. Google street view/Bing Map helps to determine the devices/conductors and poles spatial relationships in the discrepancy location.

Responsible for: Requirement Analysis, work assignment to team members. Quality control and final inspection of the final deliverables before delivering to the Client. Preparing project documents and status reports generation of all activities and training to all team members as well.

Software: ArcGIS Desktop 9.3.1, ArcSDE Versioned database and ArcFM

Platform: Windows Server enterprise, Windows XP Professional, VPN and CITRIX Server

22) RMS Springwood Transfer Project

Client: ESRI, Redlands, CA (USA)

Duration: Sept 2010 -October 2010

Role: Quality Analyst

Team Size: 10

Description: The scope of the work includes developing and testing the proposed methodologies for these potential future RMS land acquisition projects. The recent land transfer between Red Mountain Timberlands and Springwood Timberlands will be used as the pilot materials for testing the proposed procedures and tools. The project will encompass three high-level tasks:

- Legal document review and indexing
- Ownership parcel capture
- Problem and resolution workflow testing

Responsible for: Requirement Analysis, work assignment to team members. Quality control and final inspection of the final deliverables before delivering to the Client. Preparing project documents and status reports generation of all activities and training to all team members as well.

Software: ArcGIS Desktop 9.3.1 and PLTS Data Reviewer

Platform: Windows XP Professional

23) Hong Kong Land Record Project - Hong Kong, Lands Department

Client: ESRI, Redlands, CA (USA)

Duration: Feb 2009 -Sept2010

Role: SDE Database Administrator and Quality Analyst

Team Size: 30

Description: The Scope of the work includes the data migration process from source data in the form of Arc Info coverages 7.0 to file geodatabase and then to the ArcSDE enterprise Geodatabase using Oracle 11g at backend for Hong Kong, Lands records Department.

Responsible for:

- Requirement Analysis, creating project plans, work assignment to team members. Quality Control and final inspection of the final deliverables before delivering through ArcSDE replication to the ESRI Redlands and ESRI China Client
- Preparing technical project documents and status reports generation of all activities and Training to all team members
- Managing data in Arc SDE Environment includes versioning, reconciling-posting of versioned data, replication of data, Backup/restore oracle databases and compressing database

Software: ArcSDE Server 9.3.1 (Enterprise) , ORACLE 11g (11.1.0.6.0), ArcGIS Desktop 9.3.1 & WorkStation 9.3.1, PLTS Data Reviewer

24) AAI -Airport Authority of India Project

Client: Airport Authority of India

Duration: April 2008 - January 2009

Role: Quality Analyst

Team Size: 30

Description: The scope of work includes georeferencing of the maps (Gird map, 30NM Chart Map & Zoning Map) provided by Airport Authority of India. Creation of Airport structure and Landbase from the available SOI topo sheets.

Responsible for: Requirement Analysis, work assignment to team members. Quality control and final inspection of the final deliverables before delivering to the HO/Client. Preparing project documents and status reports generation of all activities and training to all team members.

25) ACC - Land Management Project

Client: ACC Cement Limited-Thane (Mumbai)

Duration: June 2008 - August 2008

Role: Technical Consultant

Team Size: 1

Description: The scope of work includes manual migration of AutoCAD data using AutoCAD manual cleanup, topology creation and attributes attachment from land schedule excel sheet, linking of sales deed and lease deed to the khasra boundary.

Responsible for: Requirement analysis, creating project plans. Database design, quality control, generation of crystal reports and final inspection of the final deliverables before delivering to the client. Preparing project documents and status reports generation of all activities.

Software: Arc View 9.2, AutoCAD Map 3D 2009

26) Texas Gas Network Data Migration Project

Client: ESRI, Redlands, CA (USA)

Duration: April 2008 - May 2008

Role: Quality Analyst

Team Size: 35

Description: The scope of work includes manual cleanup of the geodatabase where automated cleanup cannot establish connectivity. AutoCAD features are migrated into ArcGIS feature classes using geoprocessing tools. The work includes attribute population, bad geometries cleanup and snapping appropriate features to maintain gas network connectivity. The work also includes geometric network tracing.

Responsible for: Requirement analysis, work assignment to team members, quality control and final inspection of the final deliverables before delivering to the HO/Client. Preparing project documents and status reports generation of all activities and training to all team members.

27) BENTON PUBLIC UTILITY DISTRICT

Client: ESRI, Redlands, CA (USA)

Duration: Sep 16, 2007 - 17 Feb, 2008

Role: Quality Analyst

Team Size: 30

Description: The scope of work includes geometrical correction of the geodatabase where automated cleanup cannot establish connectivity. Micro station CAD features are migrated into ArcGIS feature classes using geoprocessing tools. The work includes segmentation, attribute population, bad geometries cleanup and snapping appropriate features to maintain electric network connectivity. The work also includes geometric network tracing and maintaining of correct electric flow.

Responsible for: Requirement analysis, resolving technical issues, quality control and final inspection of the final deliverables before delivering to the client.

28) RIL- LANDBASE UPDATE PROJECT

Client: RELIANCE INDUSTRIES LIMITED, MUMBAI

Duration: SEP 2007 - March 2008

Role: Shift In charge (QC)

Team Size: 150

Description: To capture and update the database from satellite imagery (IKONOS) for cities and towns of India update relevant predefined feature classes for RIL GIS database for area outside existing land base as well as areas overlapping between new imagery acquisition area and existing land base coverage area.

Responsible for: Digitization of vector data visible in the imagery with all attribute updation in fresh and pre-existing data provided by client over 156 cities land base required to be captured and updated for cities and towns of India

Software's/Language Used: ArcGIS 9.2 for Georeferencing and Digitization. **Platform:** Windows XP Professional

29) RCOMM

Client: RELIANCE COMMUNICATIONS (RELIANCE DIGITAL WORLD Ltd.)

Duration: AUG 2007 -SEP 2007

Role: Team Member-QC

Team Size: 50

Description: Reliance Digital World Ltd. is in the process of building/updating a detailed country wide GIS Infrastructure to support various telecom projects. For this high resolution satellite images are being sourced for defined area of interest for different cities. The whole process for making the GIS ready drawings will involve geo-referencing of satellite images digitization field validation and attribute addition. After this the images will be ingested into the selected GIS platform for telecom application development.

Responsible for: Digitization of vector database creation as per the client's specifications. Responsibility also includes handling report generation activities and Georeferencing and mosaicking of all data.

30) Clarke Public Utilities Project for Electric and water network

Client: ESRI, Redlands, CA (USA)

Duration: Oct 2006 - Jan 2007

Role: Team Member-QC

Team Size: 16

Description: The scope of work includes manual cleanup of the Geodatabase. Where automated cleanup cannot establish connectivity. This process is intended to clean up the existing data and a QC of the automated cleanup and to fix the connectivity issues in electric network. Missing Transformer IDs in the Service Points (where Transformer IDs are not populated programmatically). Incorrect connection/placement of Service Lines with the Transformers (at the edges of the AutoCAD plots).

Responsible for: Requirement Analysis, work assignment to Team Members. Quality Control and Final Inspection of the final deliverables before delivering to the client. Preparing project documents and status reports generation of all activities and Training to all team members.

31) Southern California Gas Network Data Migration Project

Client: ESRI, Redlands, CA (USA)

Duration: May 2006 -30th October 2006

Role: Team Member-QC

Team Size: 18

Description: The scope of work includes manual cleanup of the Geodatabase where automated cleanup cannot establish connectivity. Micro station CAD features are migrated into ArcGIS feature classes using geoprocessing tools. The work includes Segmentation, Attribute Population, Bad geometries cleanup and snapping appropriate features to maintain gas network connectivity. The work also includes Geometric network Tracing and Population of Pressure system Number.

Responsible for: Requirement Analysis, work assignment to Team Members. Quality Control and Final Inspection of the final deliverables before delivering to the client. Preparing project documents and status reports generation of all activities and Training to all team members.

Software: ArcGIS9, PLTS GIS Data Reviewer

Platform: Windows XP, Windows2000 Professional

32) Gas Utility Network Implementation for GGCL, Surat, (India)

Client: Gujarat Gas Co. Limited, Surat, India.

Duration: July 2004 -June 2007

Role: Team Member-Quality Control

Team Size: 18

Description: The Gujarat Gas Company Limited (GGCL) is a utility based GIS for Gas Distribution for three cities of Gujarat (Surat, Ankaleshwar and Bharuch). The project includes Landbase and Gas network survey, Data creation, Integration of Spatial and Attribute information.

Responsible for: Creation of Landbase and Gas Distribution network for the entire Surat, Ankaleshwar and Bharuch City of Gujarat. Quality checking and supervising the digital database creation on ArcGIS and AutoCADMap2000 as per the client's specifications. Relating spatial and non-spatial information such as gas network details and customer's information using ArcGIS.

33) SILICON VALLEY POWER -Electric Data Migration Project (General Electric)

Client: ESRI, Redlands, CA (USA)

Duration: November 2005 -March2006

Role: Team Member-Quality Control

Team Size: 10

Description: GE will validate and migrate SVP's DWG data to an interim personal or enterprise Geodatabase with resulting feature classes containing features of a common feature type (point, line, polygon, text) and layer. Attribute information (including block attributes) and distinguishing characteristics such as color or line type will be retained, the work includes edge matching, correcting gaps, overshoots, undershoots and snapping appropriate features to maintain electric connectivity, features will be generated based on criteria established during the development of the migration specification.

Responsible for: Requirement Analysis, work assignment to Team Members. Quality control and final inspection of the final deliverables before delivering to the client. Preparing project documents and status reports generation of all activities and Training to all team members.

34) Computerization & Georeferencing of Landbase Maps

Client: Regional Remote Sensing Service Center, Nagpur, India.

Duration: Dec 2003- Mar 2006

Role: Team Member- Quality

Team Size: 10

Description: Development of Spatial database for Land records management and geo-referencing of village maps with reference to satellite data (IRS 1D-PAN).

Responsible for: Quality checking and supervising the digital database creation as per the client's specifications. Responsibility also includes handling report generation activities and Georeferencing and mosaicking of Village maps to tehsil level with reference to PAN data and preparation of final data, plotting, and printing of maps at ESRI India's Parwanoo Facility, Himachal Pradesh.

35) TIGER Habitat Suitability Mapping Project

Client: Project TIGER Directorate, New Delhi.

Duration: Dec. 2003- Mar. 2004

Role: Team Member-Quality

Team Size: 20

Description: Development of Spatial database for Tiger Habitat Suitability Mapping with reference to SOI Toposheets.

Responsible for: Quality checking and digitization of the digital database creation as per the client's specifications. Responsibility also includes handling report generation activities, Georeferencing and mosaicking of Toposheets with and preparation of final data, plotting, and printing of vectorized maps.

36) Re-Alignment of parcel in CSA project (City of San Antonio)

Duration: Jan2005- Feb. 2005

Role: Team Member-Production

Team Size: 20

Software Used: ArcGIS 9.0

Description: Quality checking & Spatial Adjustment of County Parcels.

Responsible For: Spatial adjustment of County Parcels with reference to the IKONOS imagery and Quality Checking of Re-Aligned Parcels according to client's specifications and requirements with very high level of Quality.

Educational Qualifications:

Degree Obtained	Specialization	Name of institution / University
MCOM	Master in commerce, accountancy, economics, business studies, taxation etc.	Himachal Pradesh University, Shimla
Graduation	Commerce	Himachal Pradesh University, Shimla
ArcGIS Desktop Certified	Technical Certification	Esri Inc.
FME	Data migration	Safe Software
